SCIENCE HIGHLIGHTS

Clark et al. (2021) & Revealing dramatic evolution in the dust-to-gas ratio in the Local Group

Clark et al. (*subm.*) With custom *Herschel* reductions for Local Group galaxies, combined in Fourier space with *Planck*, IRAS, and COBE data, I show that the dust-to-gas ratio can vary by over a factor of

20 within a galaxy, demonstrating the dramatic importance of interstellar grain-growth.

Clark et al. (2019) The first maps of the dust mass absorption coefficient in nearby galaxies

Created maps of the notoriously poorly-constrained dust mass absorption coefficient, in

M 74 and M 83; I find a very unexpected inverse correlation with density.

Clark et al. (2015) Uncovering a previously-overlooked population of blue and dusty gas-rich galaxies

Assembled the first blind Herschel galaxy sample at low-z, finding it dominated by a class of intermediately-evolved galaxies sharing unusual set of traits; HI-dominated but metal-rich,

with very little attenuation despite abundant dust and plentiful star-formation.

ACADEMIC HISTORY

2018-PRESENT	Postdoctoral Fellow Space Telescope Science Institute
